

At Swagelok Northern California, we're committed to providing our customers with custom training seminars that align with their specific needs and concerns.

Our hands-on training seminars range from safety-focused training, such as our tube fitting safety seminar, to technical offerings like tube bending. The training sessions are led by experienced and certified Swagelok® trainers.

Participants leave Swagelok® training with an advanced understanding of processes that can enhance workplace safety, and improve efficiency and productivity.

Swagelok Northern California Training Services

Safety is our top priority. You depend on our products to connect, convey, and control materials safely and securely. Swagelok Northern California is uniquely qualified to provide outstanding training on proper product application and installation.

The core topics of the Swagelok Northern California Training are:

- Swagelok® Tube Fitting selection and installation
- Swagelok® Tube Bending techniques and best practices
- Tubing selection and handling
- VCR® Metal Gasket Face Seal Fitting selection and installation
- Valve selection, maintenance, and installation
- Swagelok Welding System operation
- Sampling System Best Practices

Customer benefits include:

- Proper application and installation of system components
- Increased productivity and lower final test costs
- Increased awareness of the potential hazards associated with fluid systems
- Reduced safety incidents

Swagelok® Tube Fitting Safety Seminar

The hands-on lecture/lab seminar covers the basics of tubing systems including tube fitting design and function, tubing versus pipe systems, proper tube fitting installation procedures, troubleshooting exercises, and more.

Customer benefits include:

- Improved employee skills
- Reduced installation and rework costs
- Increased productivity and reduced downtime
- Increased employee safety in the plant
